To The Deputy Commissioner
Tumkur District

Sir

The Hon'ble minister of health while replying to the addresses presented by the Koratagere municipality was pleased to promise Ownership water facility to Koratagere by Borewells & Pipe-arrangement where further proposed that the municipality was not in a position to meet any cost of it, the Hon'ble minister was pleased to further state that the Scheme will be taken to be worked out at Govt Expense

This help is indeed splendid & has created

Joseph left in the Worcester Bus 2
to-day because the crew of promise
the Commissioner by recommending to give them double
help is absolutely necessary.

May I also beg you to give them what they
drinking water to be sent from a long distance
by the Worcester & good water is not always
available. This is also the cause of many
ailments most often appearing in the Zoo.

I beg to remain
Sir

GOVERNMENT OF HIS HIGHNESS THE MAHARAJA OF MYSORE

General and Revenue Secretariat

Dated Bangalore, 14th February 1942.

D O No L2292/Encl only

Dear Sir,

I am desired to forward herewith a copy of letter dated 1st December 1941 of Mr. G. Ramaiya of Koratagere, addressed to the Deputy Commissioner, Tumkur District about the provision of drinking water facilities to Koratagere at Government cost, and to enquire if any scheme has been prepared in the matter.

An early reply is solicited.

Yours sincerely,

Sd.

T. Parthasarathi, Esq., L M S., B.S., Sc., (Mad), etc.
Director of Public Health in Mysore,
BANGALORE.

Memo No L2293 Dated, Bangalore the 14th February 1942

Copy of the above is forwarded with compliments to the ~~Dixxx~~ Deputy Commissioner, Tumkur District, for information.

By Order,

Secretary to Government,

Secretary to Govt. of Mysore,
Law Department, Bangalore.

Sir

Re calling for a report on the petition of Mr G Ramaiya of Koratagere re providing water supply facilities to the said town etc

====

With reference to your letter No L 7292 dated 14th February 1942 and reminders thereto, on the above subject, I have the honor to state that the Sanitary Engineer who was requested to furnish a scheme in this behalf, has stated in his letter No 354 dated 4/7th September 1942 (a copy of which is enclosed for reference) that he inspected the town with the President and that the Municipal Council appears to be of opinion that Mallanna's well, which is a draw well of about 6 feet square and 14 feet in dept with about 6 feet of water now, would meet the requirements of the town, if the same were harnessed with a small pump set and that the yield of water of this well is to be tested As it is not possible for the Municipality to incur the testing charges of Rs 400/- for which an estimate was prepared and sent, the Council have expressed that arrangements would be made to bring the pump set from Kyamenahalli and the test conducted

The Sanitary Engineer is of opinion that it is not desirable to base a water supply scheme for the town with its population of 3000 upon the surface supplies that can be got from a draw well even though the yield, at the time of testing may be satisfactory It

It is stated that when a pump set is installed and about 30,000 gallons which is the minimum quantity required for a town of the dimensions of Koratagere is drwan daily from it, the well would soon begin to fail and the permanent mains etc , would all have to be pulled out very soon at enormous cost and laid elsewhere Therefore he has suggested that it would once for all be cheaper to sink a bore-well in the immediate vicinity of Mallanna's well adjacent to the Suvarnamukhi stream and if the results are found satisfactory, harness the new installation with a deep well pump which will solve the problem of water supply once for all He has sent an estimate to the President for Rs 3,000/- for putting in two bore-wells in the locality for acceptance and approval of the Council and states that the work would be taken up soon after the receipt of the estimate duly countersigned by him

As the Council have expressed their inability to meet even the running charges (recurring) of the installation the only course would be, he says is to fall back on Mallanna's well and dig the same with a small centrifugal pump set and deliver the water on the road side near the taluk office with a balancing reservoir of about 400 gallons and four taps and the question of giving street taps all over the town will have to be dropped

The Sub Division Officer,Madhugiri Sub Division who was requested to discuss with the Councillors as to which of the above schemes may be adopted in view of the financial condition of the Municipality, has reported, that as the finance of the Municipality are very poor, the Municipality is not in a position to take up the bore-well scheme and meet the annual recurring maintenance charges as suggested by the Sanitary Engineer As resolved by the Council at their meeting held on

27-9-42

the Councillors desire that the yield of water in Mallana's well may be got tested and the testing charges met out of the closing balance of the Municipality As regards the pump set required for the purpose, he has sought for orders permitting the use of the pump set of Kyamenahalli temple

I will take early action in the matter and submit my report to Government soon after the receipt of a report from the Sub Division Officer as to the success or otherwise of the results of the test

I have the honor to be,
sir,
Your most obedient servant,

P Srinivasa Rao
Deputy Commissioner,
Tumkur District

Letter No 354 dated 4/7th September 1942 from the Sanitary Engineer, Bureau of Sanitary Engineering, Bangalore

---

Re Water supply to Koratagere Town

With reference to your memo dated nil, regarding the above, forwarding copy of your letter No A6 C 2381/41-42 dated 22nd May 1942, to the Secretary to Govt , Law Dept , Bangalore, for my information and requesting for the forwardal of a scheme for the same, I have the honor to state that I inspected the town with the Municipal President and the Vice President on 1st September 1942 The Municipal Council appears to be of opinion that Mallanna's well, which is a draw well of about 6 ft square and 14 feet in depth and has now got about 6 feet of water, would meet the requirements of the town, if the same were harnessed with a small pump set With this idea it was resolved in the Municipal meeting held on 30th December 1941 that the well should be tested for its yield and further action taken thereafter Since they have stated their inability to meet the testing charges of Rs 400/- for which an estimate was prepared and sent by the Assistant Engineer, No 1 Sanitary Sub Division Tumkur, they have now stated that they will arrange for the pump set at Kyamenahalli to be brought over and test conducted Under these new circumstances, the charges may be about Rs 100/- and if the pump set is brought and the fact intimated, the Assistant Engineer will immediately arrange for the test and report as to whether the proposal will be feasible

In my opinion I consider that it is not desirable to base a water supply scheme for Koratagere town with its population of 3000 upon the surface supplies that can be got from a draw well of the description mentioned above Even though the yield at the time of testing may be satisfactory, it should have to be stated that when once a pump set is installed and about 30,000

14

30,000 gallons which is the minimum quantity required for a town of the dimensions of Koratagere is drawn daily from it, the well would soon begin to fail and the permanent mains etc would all have to be pulled out very soon at enormous cost and laid elsewhere I, therefore, consider that it will be once for all cheaper to sink a bore-well in the immediate vicinity of Mallana's well adjacent to the Suvarnamukhi stream and if the results are found to be satisfactory, harness the new installation with a deep well pump, which will solve the problem of water supply once for all Under these circumstances, I enclose herein an estiate for Rs 3,000/- for putting in two bore-wells in the locality for favour of your acceptance and return As soon as the same is received countersigned, and the sources of meeting the cost indicated by you, the work will be arranged for

Finally, it has to be mentioned that the Municipal President expressed the inability of Koratagere Municipal Council to meet even the running charges of such an installation The probable cost of annual maintenance of such an installation would be Rs 1,500/- and in the event of Koratagere Municipality being unable to find an annual recurring maintenance expenditure of Rs 1,500/- the only course that would be possible, is to fall back on Mallanna's well and rig the same with a small contrifugal pump set and deliver the water on the roadside near the taluk office with a balancing reservoir of about 400 gallons and four taps, the question of giving street fountains all over the town having to be once for all dropped All these alternatives may kindly be considered in the light of the financial position of the Municipality and your final decision intimated

Re Water Supply Scheme to Koratagere Town

Sir,

With reference to your office D O Letter No L 7282 dated 14th February 1942 forwarding a copy of letter dated 1st December 1941 of Mr G Ramaiah of Koratagere addressed to the Deputy Commissioner Tumkur about the provision of drinking water facilities to Koratagere at Government cost, and enquiring if any scheme has been prepared in the matter, I have the honour to state that the Sanitary Engineer intimates in his letter No 299 dated 7th September 1942 copy enclosed that he inspected Koratagere with the Municipal President and Mr G Ramaiah on 1st September 1942 and has opined that a borewell is to be put up in the immedi te vicinity of Mallanna's well (which is a draw well of about 6 Ft of surface water) and adjacent to the Suvarnamukhi stream and if the results of the borewell are found satisfactory, harness the well with a deep well pump which will solve the problem of water supply to Koratagere Town once for all and if the Municipal Council are not agreeable to the putting in of a borewell, a Centrifugal pump set may be installed on Mallanna's well and deliver water on the roadside near the Taluk Office with a balancing reservoir of about 400 gallons and four taps, the question of giving street fountains all over the town being dropped

The Sanitary Engineer has also sent an estimate to the President, Koratagere for Rs 3,000/- for putting in two borewells

two borewells in the locality for approval and acceptance.

The Deputy Commissioner in his letter No A6 C 2381/41 dated 11th January 1942 addressed to Government has stated that the Municipal Council have expressed their inability to meet even the running charges (recurring) of the installation and the only other course is to instal a small centrifugal pump set on Mallanna's well and deliver water on the road-side near the Taluk Office

Re Water Supply to Koratagere town

With reference to your Memo No C 673-9/41-42 dated 20th July 1942 I have the honour to state that I inspected the Koratagere town with the Municipal President on 1st September 1942 Mr G Ramaiah, Pleader and Member, Representative Assembly Koratagere in his letter dated 12/13th July 1942 to you has suggested that a borewell scheme should be put up for water supply to the above town On the other hand, the Municipal Council have resolved that it is desirable to fall back upon Mallanna's well for the water supply to the town I herein enclose copy of my letter No 354 dated 4/7th September 1942 to the Deputy Commissioner, Tumkur, for your information, and it clearly indicates my views in the matter As soon as a reply from the Deputy Commissioner is received, necessary action will be taken for putting up the borewells As soon as the borewell is put in and yield is tested with regard to its satisfactoriness, the complete scheme for water supply can be got up since the cost of the scheme greatly depends upon the position of the borewell Your original Memo No C 673-7 dated 2nd June 1942 is herewith resubmitted

ir,

Re water supply scheme of Koratagere town.

In continuation of this office letter of even number ated 12/11/1942, on the above subject, I have the honor to tate that the Sanitary Engineer who was requested to xxxxx nvestigate and suggest a cheaper scheme in view of the lender finances of this minor municipality, states, that he only course possible for the municipality is to fall ack on Mallanna's well and rig the same with a small entrifugal pump set and deliver the water on the road-ide near the taluk office with a xx balancing reservoir of bout 400 gallons and four taps The question of giving treet fountains all over the town being dropped once for ll as the finances of the Municipality are too slender to ake up costlier schemes

An estimate for Rs 225/- received from the Sanitary
